

142 Human Genetic Disorders Answer

A race is a grouping of humans based on shared physical or social qualities into categories generally viewed as distinct by society. First used to refer to speakers of a common language and then to denote national affiliations, by the 17th century the term race began to refer to physical (phenotypical) traits.

Race (human categorization) - Wikipedia

Humans (*Homo sapiens*) are the only extant members of the subtribe Hominina. Together with chimpanzees, gorillas, and orangutans, they are part of the family Hominidae (the great apes, or hominids).

Human - Wikipedia

A TATA box (sometimes Goldberg-Hogness box) is a conserved sequence found in the promoter region of some genes in eukaryotes and archaea. It is responsible for the binding of transcription factors or histones (the two are antagonistic) and is usually located approximately 25 base pairs upstream of the coding region.

What is a TATA box? - Quora

Cytochromes P450 (CYP) are a major source of variability in drug pharmacokinetics and response. Of 57 putatively functional human CYPs only about a dozen enzymes, belonging to the CYP1, 2, and 3 families, are responsible for the biotransformation of most foreign substances including 70–80% of all drugs in clinical use.

For each modality of data, we changed the p threshold (0.0001, 0.0005, and 0.001 to 0.01 with a step of 0.0005). For a given p threshold, we performed the leave-one-out cross-validation approach n times (n = number of subjects), each time with one subject being the test set, and the rest of the subjects were used to construct the creativity ...
